

Executive 70C-6 MC

Executive
FILLER METALS

A high performance metal cored wire second to none.

Executive 70C-6 MC is the latest generation of low-fuming carbon steel metal cored wire designed to improve welder productivity and help reduce welding costs. Virtually no slag coverage with minimal, easy to remove Silicon islands further enhance clean up.

This is a premium wire that has excellent wetting characteristics and will produce smooth weld beads with uniform fusion. Highly consistent with great weldability intended for single or multi-pass welding in various steel weldments and fabrications. This wire can be used with a variety of high argon shielding gases, has great mechanical properties with low hydrogen content.

Executive 70C-6 MC promotes a cleaner work environment and reduces overall welding costs in the process. Shipped with actual CMTR's that include certification to AWS D1.8 for critical seismic applications.

Executive 70C-6 MC is an industry leader in metal cored out of position performance.

Executive 70C-6 MC Advantages

- Superior out of position welding
- Excellent mechanical properties (H4)
- Low fume characteristics
- Easily removed silicon islands
- Certified for seismic applications
