

COMPLETE CUSTOM SPOOLING SERVICES BY EXOCOR

Exocor offers premium spooling services for customers who require spooled product from reel to reel including 12", 8", 4" and AMI® spools.

All manufacturers have spooling capabilities while producing wire, however there are very few companies that do custom, small scale spooling jobs and most companies don't even consider custom spooling as an option.

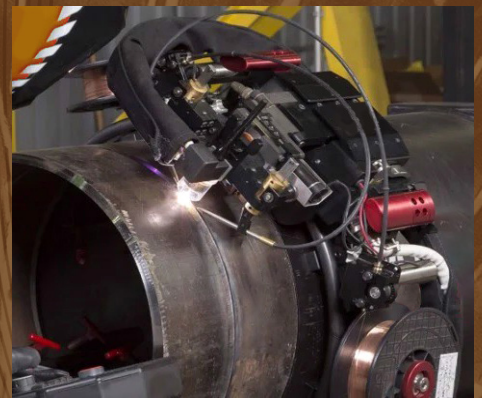

Although smaller spools are accessible for common grades, numerous alloys are exclusively offered in standard sized spools, which might not be optimal for certain processes or specific job requirements.

Our custom spooling machines have an operator-controlled motor that allows for layer level winding on a variety of spool hub sizes including 8", 4" and even 2" AMI® half-pound spools.

Additionally, our ISO-9001 certified quality controlled processes ensure full heat control and traceability from the beginning of the spooling job right to your door.

With specialty spooling services available in two of our facilities, Exocor can quickly and professionally complete work tailored to your needs including repairing damaged spools and working with customer supplied wire.

Contact Exocor today and request your quote for spooling services catered specifically to your needs.

Custom Spooling Services

- Reprocess full sized spools for suitcase feeders, orbital TIG or AMI® work
- Reclaim wire from broken spool hubs

AMI® is an ESAB brand
